Summary

Full Stack Senior Software Engineer with expertise in designing and developing scalable software systems. Proven track record of delivering successful projects on time and within budget.

I am keen to enhance my working capacities, professional skills, and business efficiency, and to work with the organization in the best possible way, with sheer determination, commitment, and professional skills

Education

Bachelor's In Information Management

Stxavier's College (CGPA 3.24)

2009- 2013

Kathmandu, Nepal

Projects:

12-2023 - 04-2025

Remote

- ❖ [Game development with its Admin panel](#)

This project involved the end-to-end design, development, and deployment of a cross-platform casino-style game with an integrated administrative dashboard. The game was built for Android, iOS, and Web platforms, followed by the creation of a comprehensive CMS to manage game content, users, and transactions.

Key Role:

Game:

- Designed, coded, tested, and deployed a Unity-based game for Android, iOS, and Web platforms, including a main game and six mini-games.
- Ensured cross-platform functionality and performance optimization across all target devices.
- Delivered a fully functional game prototype, followed by the complete game suite, and provided post-deployment maintenance for three months.
- Handled source code and documentation delivery after each development phase

Admin Panel:

- Developed and maintained a full-featured CMS admin dashboard using React and Next.js with Tailwind CSS, enabling real-time content management, user analytics, and game oversight.
- Built RESTful APIs and backend services using C# and .NET to support player authentication, data persistence, and real-time interactions.
- Integrated Stripe for secure in-game payments and subscription handling.
- Created an intuitive and responsive UI/UX for administrative tools, empowering non-technical stakeholders to manage game content efficiently.

Key Achievement:

- Successfully delivered the project in clear, structured phases—from game prototype to full deployment and maintenance, followed by a scalable admin dashboard—meeting all approval gates and functionality requirements.
- Delivered a maintainable and user-friendly admin platform that enabled efficient content and user management post-launch.

Projects:

📅 04-2022 - 11-2023 📍 Remote

❖ Food Cost Management System

This system is a comprehensive Restaurant Management System with features for Point of Sale (POS), Inventory, and Payroll Generation. The system aims to streamline operations, enhance customer experience, and improve staff efficiency.

Key Role:

- Converted the existing .NET 2 MVC app to .NET 6 and was also involved in creating the new module in React.
- Converting the existing web services into a rest api in NestJS.
- Involved in creating a separate new application written in Java and Angular.
- Take responsibility for the given module, communicate with the PM for the requirements, and coordinate with the team members to complete the task.
- Created architecture for the API in NestJS.
- Worked in Jira and agile methodology, and was also involved in the code review process.

Key Achievement:

- Experience with EC2 servers, S3 buckets, and also used Azure and GIT for CI/CD pipeline.
 - Successfully converted the project from the old version of .NET to the latest .NET 6
-

❖ Software for cargo logistics

This system is a freight forwarding service that connects suppliers and buyers through real-time status updates and financial settlement, enabling both parties to negotiate and agree on logistics execution with a verified track record.

Key Work:

- Coordinated with business analysts for the project requirements, creating the technical document.
- Communicated with cross-functional teams, including QA, UI/UX, and product management, to ensure smooth project execution.
- Implemented Scrum to enhance the team's productivity and efficiency.
- Created architecture for the project and helped team members to resolve the task, and was also involved in the code review process.

Key Achievement:

- As a team lead, I maintained the communication channel among the team members and developed software for cargo logistics.
 - Implemented Azure for the kanban board and CI/CD pipeline for the smooth deployment process.
-

[Research](#)

Projects:

📅 03-2020 - 12-2020 📍 Remote

❖ Multi-vendor E-commerce & Logistics Prototype

Developed a comprehensive multi-vendor e-commerce and logistics platform enabling local businesses to manage online storefronts, inventory, payments, and order fulfillment through a centralized admin dashboard and mobile applications. The system supports super-admin oversight, individual shopkeeper dashboards, real-time parcel tracking, and in-app chat between customers and vendors—delivering a full-cycle retail and restaurant management MVP

Key Work:

- Architected and built an Angular admin dashboard with NGRX for state management, allowing super-admins and shopkeepers to onboard, customize stores, manage inventory, track logistics, and view payment analytics
- Developed two React Native mobile apps (consumer e-commerce and rider logistics) using Redux for

state consistency, featuring real-time geo-tracking, multi-vendor shopping, and chat functionality.

- Designed and implemented .NET Core APIs to handle mobile app data, vendor/order processing, real-time notifications, and integration with mapping and payment services.

Key Achievement:

- Successfully launched a working multi-store MVP, integrating web (Angular), mobile (React Native), and backend (.NET Core) into a unified platform.
- Implemented scalable state management using Redux in React Native apps and NGRX in Angular, ensuring consistent data flow and real-time UI updates across vendor dashboards and mobile interfaces.
- Enhanced the knowledge of state management and implemented the Redux structure in a mobile application and NGRX in an Angular project

📍 Remote

❖ Software for Multi-Store System

Mobile Application Development that enables store staff to generate and print QR-based price tags for products using a centralized system, and scan those tags via a mobile application to instantly retrieve detailed product information, reducing manual entry errors and improving inventory tracking accuracy.

Key Contributions:

- Worked on APIs to handle product data management, QR generation, and real-time inventory updates between the mobile app and the backend system.
- Developed a cross-platform mobile app (React Native) with QR scanning functionality, allowing store staff to scan product labels, view product details (pricing, stock levels, supplier info), and update inventory status directly from the app.

Key Achievement:

- Delivered MVP, from QR tag printing to mobile scanning and real-time data synchronization.
- Successfully integrated third-party QR libraries and print services into the system, enabling seamless label generation and offline-capable mobile scanning for store environments

❖ HR System Modernization & Reporting Integration

HR and Financial Management System designed to streamline core HR operations, automate payroll processing, and provide comprehensive reporting tools for both personnel and financial data

Key Contributions:

- Upgraded the legacy MVC HR system to a modern Angular SPA, improving UI/UX, modularity, and frontend performance while ensuring seamless integration with existing .NET backend services
- Refactored backend APIs in .NET Core to support Angular's reactive data flow, adding endpoints for real-time dashboard updates, employee data management, and financial analytics.
- Implemented role-based access controls, audit logging, and secure data handling across both the upgraded HR platform and the new reporting module.

Key Achievement:

- Successfully modernized a critical HR system without disrupting ongoing operations, reducing page load times by ~40% and improving overall user satisfaction.
 - Established a maintainable Angular architecture with reusable components and services, setting a foundation for future feature expansions and team onboarding.
-

Projects:

📅 01-2016 - 12-2018 📍 Nepal

❖ GBcare Case Management System

This project is a medical assistance system for nurses and healthcare professionals, integrating with existing health insurance systems. The system's primary goal is to streamline claims processing, billing, and reimbursement while providing value-added services tailored to nursing staff needs.

Key Work:

- Worked as a Team lead, had to coordinate with business analysts for the requirement, and create tasks among the team members.
- Involved in helping the team members and reviewing their code to maintain the code structure.
- Converted the existing application to .NET MVC with Domain Driven Design and implemented SSRS for reporting tools.
- The complex business logic was written as stored procedures and views in the database to optimize the reporting system.
- Created web services to integrate the third-party service into the system and APIs to expose our data to other applications.
- Conducted extensive testing and debugging to ensure system stability and accuracy of the data processing.
- Worked on support to handle the bugs after the system is deployed.

Key Achievement:

- Lead a group of 5 developers in a project in .NET MVC, undertaking the SDLC of the whole project.
 - Had an experience with Web API, and SQL-BI for reporting (SSRS)
 - Implemented robust and scalable solutions to handle complex health data, workflows, and compliance requirements
 - Successfully delivered a comprehensive health case management system within a given time frame and received positive feedback from clients.

❖ Loyalty Program for Macys

This System is an innovative platform designed to reward and engage loyal customers. This system aims to create a personalized experience for each customer, fostering long-term relationships and driving repeat business.

Key Role:

- Worked on design documents and technical documents.
- Created different unit test cases in NUnit.
- Worked in the business layer and data conversion from DTOs and modules.
- Got the understanding of the two-way binding JavaScript library, KnockoutJS.
- Created various client-side validations in JavaScript.

Key Achievement:

- Enhance my knowledge in software design patterns and architecture (Domain Driven Design)
 - Enhanced my web development skills
 - Worked on various documentation, like design documents and technical documents.
-

Associate Software Engineer,

[GreenApple Pvt, Ltd](#)

Projects:

📅 03-2013 - 12-2014 📍 Nepal

❖ School Management System with Accounting System

This system is a WPF-based desktop application that provides an integrated platform for managing school operations, including financial management, inventory control, and student account tracking. It

offers a comprehensive solution for schools to streamline their administrative tasks and improve overall efficiency.

Key Role:

- Collaborated with seniors to design and implement the software.
- Worked in a business layer for an accounting system, which included financial reports with pagination
- Contributed to the development of an error-handling mechanism to improve stability.

Key Achievement:

- Started as an intern and was promoted to associate software engineer.
- Learned the code structure, architecture in WPF, and version control.
- Implemented a feature of data visualization, enhancing the usability of the application.
- Contributed to the successful launch of the software.
- Enhance programming skills in C# .NET

❖ Software for Co-operative Financial Institutions

This is a web-based cooperative software designed to manage client savings accounts, track transactions, and generate accurate financial reports, including Trial Balance, Balance Sheets, and other key performance indicators

Key Role:

- Learned the web-based structure in ASP.NET with user controls and client-side validations.
- Worked on SQL stored procedures and functions for report generation.
- Worked in log maintenance to handle the error and downtime of the project.

Key Achievement:

- Enhance web application development with interactive UI in ASP.NET MVC.
 - Optimize the performance by improving queries in the stored procedures.
 - Deployed the Web project with a reporting system
-
